

PEEL OFF A STICKER OR DECAL

STICKERS + DECALS

Peel off a sticker or decal

A sticker or decal. You can catch the edge with a fingernail.

Written steps

1. Grab a hair dryer, a plastic scraper or old gift card, rubbing alcohol, and a soft cloth.
2. Warm the sticker with the hair dryer on medium for 20 to 30 seconds to soften the glue. Keep the dryer moving.
3. Lift one corner with the plastic scraper. Don't use a metal blade; it scratches.
4. Peel slowly, keeping the sticker low and folding it back over itself. If it starts to tear, warm it again.
5. Wipe leftover glue with a little rubbing alcohol on the cloth, then dry the surface.

Old or brittle decal? It may come off in pieces. Warm a small section at a time and peel as you go.
