

WIPE OFF A PRINTED LOGO

PRINTED ON PLASTIC

Wipe off a printed logo

Flat ink on plastic. No edge to catch.

Written steps

1. Grab rubbing alcohol (70% or higher), cotton pads, and a soft cloth.
2. Test on a spot nobody sees, like the bottom. Dab a little alcohol, wait a minute, and check that the surface isn't clouding, softening, or losing color.
3. Dampen a cotton pad. It should be wet, not dripping.
4. Rub the logo gently in small circles. Give it a few minutes.
5. Wipe the area clean with the cloth and let it dry.

No luck? Some inks won't come off with alcohol, even with soaking. Don't move up to acetone or harsher solvents; they can eat plastic. Cover it with a sticker instead.
